

Bullet- Resistant Glass for armoured **OEM and Retrofitted Vehicles**

Technical Information:

Thickness: 63 mm

Weight: 158 kgs/m²

Ballistic standard: VPAM9

Features:

Notch in the ballistic package: It provides better fitting to the body car, preventing breakages.

Steel Plus: Steel offset that extends the protection of the glass to the edge of the same, reinforcing the structural resistance of the glass.

Edge Plus: Powerful edge protection layer that guards the glass against external agents that may compromise its durability.

Our glasses may also incorporate:

Heating systems: Heating elements, temperature sensors and controllers for de-icing and defogging.

Blast Retention systems: It provides better adherence of the glass to the body car.

Light-weight solutions: Outstanding weight and thickness reduction while preserving the best ballistic performance.

Dura P: Protective polymer that enhance the resistance of the spall-shield from chemical reactions.

High Performance: Products that incorporate the latest technologies to preserve ballistic protection when exposed to high and low temperatures.

Thanks for visiting our booth!

We are looking forward to working with you and offer the best solution designed to your requirements
